Options affecting inspection and verification

Option	Subject	Technical effect
Option 3	Product analysis	Requests product analysis in addition to cast analysis.
Option 4 / 5	Impact verification	Verification for the applicable impact group or longitudinal verification at −10 °C for non-alloy grades.
Option 6	Elevated-temperature properties	Verifies Rp0.2 at the specified test temperature.
Option 8 / 9	Supplementary TC2 NDT	Adds transverse- and laminar-imperfection examination.
Option 13	3.2 inspection certificate	Invokes an EN 10204 3.2 certificate instead of the basic certificate route.
Option 15 / 16	Wall measurement and NDT method	Requests wall-thickness measurement away from the ends and specifies the NDT method.
Option 19	Positive material identification (PMI)	Invokes positive material identification; this option appears in the 2024 option list.
